TUNNEL SUPPORT SYSTEM FOR THE SAFE EXCAVATION OF TUNNEL KARAKORAM HIGHWAY PHASE II HAZARA MOTORWAY

By MUHAMMAD ADNAN SAMI MUHAMMAD OUSAMA KHAN MUHAMMAD UMER

DEPARTMENT OF EARTH AND ENVIRONMENTAL SCIENCES BAHRIA UNIVERSITY ISLAMABAD 2018

ABSTRACT

This thesis is based on the tunnel excavation process used in Abbottabad tunnel no.1located at MalikPura having coordinates (34°09'59.2"N 73°11'31.5"E) along with the initial support system methodology used in the tunnel construction. The major tectonic of the area is Hazara syntaxis which is located at the north east of the Abbottabad tunnel no.1. Most of the area compromised of Hazara formation in which the specifically tunnel area contain phyllite in tunnel one and quartzite and slate in tunnel two. The tunnel face has been completed while the excavation process on the rest of the tunnel is ongoing. In the first tunnel the excavation process was being done by excavator machine and during the excavation a water spring was found. The Q value of rock that we found were Q4 and Q5 according to the Q value system. In the first tunnel supporting was weld mesh, rock bolts and shotcrete pipe canopies were installed for stiffer support while the shotcrete was sprayed and rock bolts were already installed.

In the second lane where excavation was being processed by drill and blast technique but due to the mistake in drill and blast schematics the cavity was formed at the excavation face and tunnel started to collapse because of which further excavation was held and the engineering and geologist provided a solution of tunnel collapse. As the cavity was six meter in height so muck buttressing along with shotcrete support was favored as a temporary solution.

ACKNOWLEDGEMENTS

Several individuals have contributed, directly or indirectly, toward making this thesis a reality. We would like to especially thank my supervisor, Mr. Saqib Mehmood Assistant Professor E&ES Department Bahria University Islamabad, for his encouragement and very helpful advice to me throughout my research. We have been very fortunate that he is my supervisor, and have learned many lessons in working under his guidance and leadership that we will remember for an extremely long time. Special thanks to Professor Dr. Tehseenullah Khan for allowing us to visit the Abbottabad tunnel no.1. We also acknowledge with gratitude the support of the Abbottabad Tunnel Staff of NHA & CPEC. We also owe many thanks to our fellow researcher, Ameer Hamza ,Umair Javiad and Malik Awais, for the comradeship we experienced and for the countless useful conversations we had, often as we solved and researcher the project specific problems. I am also grateful to Mr. Masood Anwar who shared a particular interest in this research area. Thanks are also due to the staff of the Earth & Environmental Sciences Bahria University, with whom we enjoyed a convivial relationship both inside and outside the University. We owe a debt of gratitude also to many of my former colleagues. Our thanks also go to Madam Maryam, Mr. Touseef, Mr. Khubaib and Mr. Hamza Naseem for the real interest they showed in my work throughout and for the many in depth discussions we had, and to Mr. Fahad for their assistance in grooming our problem solving skills. Our time on the Abbottabad site was challenging, often hot and sometimes frustrating but overall it was fun, assisted by all the members of the site team who made us very welcome. Finally we would like to thank all my friends and family for their support and kindness to me throughout my research and in writing this thesis.
