## **ABSTRACT**

The objectives of this study was to investigate the petrographic characteristics and mechanical properties of Lockhart Limestone exposed in Shah Alla Ditta, Islamabad, Pakistan. For each test, four bulk samples were taken from the study area. Mechanical tests were carried out which includes uniaxial compressive strength test (UCS) and schmidt rebound hammer (SRH) test. Petrographic studies were also carried out on 4 samples of Lockhart Limestone. By petrographic study, calcite and bioclast were found as the major constituents of Lockhart Limestone. The rocks were classified into wackestone and mudstone according to Dunham classification. Comparative study of UCS with calcite and bioclast showed direct relation with calcite content and inverse relation with bioclast. Regression analysis was also performed to find out linear relationship between UCS and SRH. A strong coefficient of correlation of ( $R^2 = 0.8133$ ) was found between these two mechanical properties. The regression equation can be used in order to predict UCS of Lockhart Limestone using the value of SRH, as SRH is relatively cheaper and less time-consuming test.

## **ACKNOWLEDGEMENTS**

All praises to Almighty Allah, the merciful and the beneficent. We would like to express our special thanks to our supervisor Mr. Masood Anwar (Senior lecturer Bahria University Islamabad) for the encouragement and support in each step during the entire research. We would also like to thank the supporting staff of Bahria University Islamabad for providing us the required tools and the access to petrographic lab.

We would also like to thank our parents and friends who helped us a lot in finalizing this project within the limited time frame.

## **CONTENTS**

<b>ABSTRACT</b>	i
<b>ACKNOWLEDGEMENTS</b>	ii
<b>CONTENTS</b>	iii
<b>FIGURES</b>	v
<b>TABLES</b>	vi
<b>ABBREVIATIONS</b>	vii

### **CHAPTER 1**

#### **INTRODUCTION**

1.1	Introduction	1
1.2	Engineering Geology and Its applications	2
1.3	Limestone and its importance in Engineering Geology	2
1.4	Introduction to study area	3
1.5	Location and accessibility	4
1.6	Aims and objectives	4
1.7	Methodology	5

### **CHAPTER 2**

#### **TECTONIC SETTING OF PAKISTAN**

2.1	Tectonic setting	6
2.1.1	Main Boundary Thrust (MBT)	6
2.1.2	Tectonic setting of study area	7
2.2	Generalized stratigraphy of study area	8

## **CHAPTER 3**

### **PETROGRAPHICAL ANALYSIS**

3.1	Petrography	9
3.2	Preparation of thin section	9
3.2.1	Petrographic study of Lockhart Limestone	10
3.3	Observations	10
3.4	Petrographic studies	12
3.5	Petrographic composition of Lockhart Limestone	14

## **CHAPTER 4**

### **GEO-MECHANICAL PROPERTIES**

4.1	Introduction	15
4.2	Uniaxial compressive test (UCS)	16
4.2.1	Rock strength parameters based on UCS	16
4.2.2	UCS of Lockhart Limestone	17
4.3	Schmidt rebound hammer test.	18
4.3.1	Schmidt rebound hammer test of Lockhart Limestone	19

## **CHAPTER 5**

### **RESULTS AND DISCUSSIONS**

5.1	Relationship between UCS and Calcite	20
5.2	Relation between UCS and bioclast	21
5.3	Linear regression analysis of Schmidt Rebound Hammer and UCS	22

<b>CONCLUSIONS</b>	23
