Acknowledgments

This project took the enormous extent of work, dedication, and research. This would not have been possible if we don't have the assistance of many people and we are extremely fortunate to have got this all along the completion of our project work. At first, all thanks to Al-Mighty Allah who gave us the ability and strength to complete the project, and then we would like to thank the crucial role of our parents for their support trust and members of our institute Bahria University, Karachi Campus for their cooperation and encouragement We would like to give a special gratitude to our final year project supervisor, Engr. Bushra Fazal, whose continuous involvement, guidance and encouragement, helped us to build up this project.

Abstract

Stress is common in all our lives today. In our society stress is treated as a mental disorder but it's a temporary feeling. Stress can be in any form of physical, psychological, emotional and cognitive from. Stress is a response in accordance with pressure and threat. Under stress, we may feel tense and nervous. Our application main goal is to manage stress for certain period of time.

Our project will measure and manage physical and psychological stress. Our aim is to manage and measure stress for a particular time, so the user can perform the task with his/her best abilities and feel relaxed. We are measure physical stress on the factor of HRV and to measure psychological stress through Perceive stress techniques. For Psychology stress we are using Perceive Stress scale these questions are hidden in storyboard scenario. Activities appear on the basis of physical stress level. At the time of testing it was notice user with increases level of physical stress level by playing the activities in the application user psychological stress level decrease as time passes.
