Acknowledgments

First of all Thanks to Allah Almighty for all his blessings who gave us the ability, strength and courage to complete Our Project.

In Developing our Project, we had to take the guidance and help of some valued persons, who deserve our thankfulness. We have pleased to complete this project. Our team would like to show our gratefulness to Final year project Supervisor, Engr-Reema Qaiser Khan, her help, stimulating suggestions and encouragement, helped us to complete our project. She provided all the necessary information for developing a good system, and invested her full effort in guiding us in achieving our project goal.

We are thankful to and fortunate enough to get constant encouragement, support and guidance from all Teaching staffs of Our Department Specially Sir Engr-Muhammad Faisal for their cooperation and helping us throughout the project

We would like to show our gratitude to Internet links, friends to give us guide for FYP throughout the period of Development. Numerous individuals, particularly our schoolmates and colleagues itself, have made profitable remark recommendations on this Project.

Abstract

Throughout the supply chain process, there is a factor of communication between different stake holders and in Pakistan there are many people that establish that communication i.e. order bookers or some stockholders communicate through mobile or telephone to paste the Product order.

The main purpose of this WebApp is to create easy Communication between Distributor and Retailer in their order booking process and to make process smooth by saving time, man power and effort.

Each stakeholder in this process has its own set of demands and our motive is to establish communication between different stakeholders through a Website platform.

Keywords: Distributer, Retailer, Product order
