Acknowledgments

I would like to express my special thanks of gratitude to my teacher Engr. Huma Tabassum, faculty and students of Psychology department specially Dr. Maha Mohsin for her guidance as well as our HOD Dr. Sohaib Ahmed who gave me the golden opportunity to do this wonderful project on the topic MoodBot, which also helped me in doing a lot of research and I came to know about so many new things I am really thankful to them. Secondly I would also like to thank my parents and friends who helped me a lot in finalizing this project within the limited time frame.

Abstract

In the past several years, it has been observed that the impact of psychologist in our society has become important day by day. Due to this reason, the availability of psychologist is accounted to be a problem for patients since the psychologist are already loaded with several appointments. In addition, the patient sometimes has a problem for managing his/her time according to psychologist availability. In order to resolve the issue, this application has been created to make it easy for patients to interact easily and effectively, even in the physical absence of the psychologist. As well as our project will interact with the patient in a very healthy, delightful and friendly way to analyze patient mood and try to distract the patient from his or her worst mood by a chat in a friendly way, by suggesting music, games and some interesting tasks to patients to make them busy and make them feel relief from stress and depression.
