ACKNOWLEDGEMENTS

We would like to thank everyone who had contributed to the successful completion of this project. We would like to express our gratitude to our research supervisor, Miss Aisha Danish for her invaluable advice, guidance and her enormous patience throughout the development of the research.

In addition, we would also like to express our gratitude to our loving parent and friends who had helped and gave us encouragement.

AUTOMATED SELFIE BOOTH

ABSTRACT

The objective of this project is to develop an Automated Selfie-Booth (ASB). The ASB is a smart photo-booth in which selfies are automatically captured via face detection. Upon face detection, a selfie will be automatically captured, customization can be done on the image using photo-effects & can be copied to any external storage or emailed. It protects user privacy as the image is automatically deleted after copying it to the USB or when user emails himself. The ASB is an innovate and automated photo-booth which does not require any manual operator. The ASB is ideal object to be placed in shopping mall, wedding events or corporate marketing activities for making instant memories for everyone.
