## **Abstract**

In corporate finance the financial decision making is a crucial area. From policy makers as well as from academics it has received high attention. To check the impact of ownership structure on dividend payout and financing policy of non-financial distressed and non-distressed firms of Pakistan is the main theme of the study. For the purpose of the research total 225 firms of non-financial sectors are taken out of which 185 are distressed and 40 are non-distressed firms that are listed on Pakistan stock exchange. From 2011-2017,6 years data is collected from annual reports of the firms. In research secondary data is used. By using three different tests including correlation analysis, descriptive analysis and panel data regression method the results are revealed. To conduct the results Stata software is used. Authors have their divergent point of views according to some previous researchers. Some authors suggest that ownership structure has positive impact on corporate decisions while the some other authors suggest that ownership structure has its negative impact on corporate decisions. Companies distribute more dividends with higher shareholding by its owners it is assumed. It is also assumed that companies distribute more dividends with higher institutional shareholding to please them. To undergo the study this contradiction encouraged researcher. In financial decisions (dividend payouts and capital structure) whether institutional and managerial shareholding makes a significant difference or not this study inclines towards these findings. The companies with higher institutional ownership invest more capital and tend to pay better dividends according to our study findings. Moreover, firms make better dividend policies with higher profitability.

**Keywords:** *Ownership structure, Dividend Payout Ratio, capital structure, OLS*

## **Acknowledgement**

*All the Praises are for Almighty Allah*

First of all thanks to Almighty Allah for giving me strength, understanding and ability to complete the research.

I would like to express my gratitude to my research advisor Mam. Nida Aman for guiding me and also support a lot in my whole research. For thesis construction she inspired me a lot. Her scientific attitude and broad knowledge benefitted me a lot. My supervisor also helped me to improve the thesis logic and framework. Her valuable comments and timely critical make my thesis more plentiful and precise.

I am also thankful to my Amma (May Allah rest her soul in peace) it is only because of her prayers that I am completing my thesis. I am also grate full to my aba that he supported me a lot and motivated me. In developing research our appreciation and thanks also go to our colleagues and to those people who was always willing to help me and stand by me in my difficult times.

In the research I have taken efforts. However without help of many individuals and kind support it would not have been possible for me to complete my thesis. I am thank full to authors who provided me information and content related to my thesis. I am really thank full to all of them.

May Allah give me success (Ameen) and show his blessings on me.

## **Declaration**

I, **Maryam Aslam** enrollment No.**01-120161-018** student of MBA, declare that my thesis is my own work. My thesis entitled “Impact of ownership structure on corporate decisions: Evidence from Pakistani non-financial distressed and non-distressed firms.” This work has not been published, submitted and printed as research work in Bahria University in any form.
